

36,000 km of
invisible excellence.

The Australian Rail Super-Cycle: Bridging Macro Capital and Micro Reality

Investment Thesis

National Rail Network: 36,000 km

Annual Industry Revenue: \$38.8 Billion

Maintenance Share (25–30%)

The Strategic Maintenance Pyramid

“Excellence is Invisible:
In rail, superior maintenance
is defined by the absence of
public disruption.”

Predictive
(Cost-Optimal, Sensor-Driven)

Reactive
(High-Cost
Corrective Repairs)

Context: Australia is entering a decade-long (2024–2034) infrastructure super-cycle. Massive capital flows must translate into granular asset maintenance—from mega-projects to individual sleeper density.

Australian Rail Maintenance

The Big Picture

Raj Champaneriya | rajc.work

KEY INSIGHT

Excellence in rail maintenance is invisible — the better the work, the less the public notices.

Scale of Australia's Rail Network

36,000+

km of track
London to New York & back

\$38.8B

industry revenue (2024)
25-30% flows to maintenance

\$10B+

annual maintenance spend
across all operators

Key Operators & Stakeholders

INFRASTRUCTURE (BELOW RAIL)

- ARTC — interstate track network
- State-owned rail corporations
- Mining-owned dedicated networks

OPERATORS (ABOVE RAIL)

- Aurizon, Pacific National (freight)
- Sydney Trains, Metro Melbourne
- John Holland, UGL (contractors)

Asset Categories

TRACK

Rails, sleepers,
ballast

SIGNALS

Signalling &
communications

STRUCTURES

Bridges, tunnels,
level crossings

ROLLING STOCK

Locos, wagons,
passenger cars

ELECTRICAL

Overhead wiring,
substations

Three Maintenance Types — A Strategic Hierarchy

PREVENTIVE

Scheduled inspections
Routine replacements
Calendar-based cycles
Traditional approach

CORRECTIVE

Fixing identified defects
Reactive repairs
Unplanned interventions
Required but costly

PREDICTIVE

Sensors & data analytics
Anticipate failures
Condition-based decisions
Strategic frontier ★

Maturity →

Australia's Unique Challenges

● Extreme weather

● Vast distances

● Mixed freight-passenger

● World's heaviest haul

MACRO: \$100B+ committed transport spending over the next decade — unprecedented demand for maintenance capability.
